# SAFE CUTTING

**"Safe cutting" is Knifeline's top priority. The range includes high-quality safety tools, such as safety cutters, scrapers and fingersavers to prevent (cutting) accidents in the workplace.**

By applying advanced safety techniques at multiple levels, our tools help create a safer work environment and significantly reduce the risk of cuts. Knifeline works closely with employees who use cutting tools daily, analysing real workplace challenges to deliver effective solutions and expert advice. This approach keeps staff safe and

productive while reducing unnecessary medical costs.

When a specific cutting problem has no existing solution, customization offers a solution. In collaboration with a specialist designer, tailor-made cutting tools are developed to achieve the desired objective safely and efficiently.

Cutting safely means working efficiently.

## Safe cutting starts here

To meet the highest standards of workplace safety and efficiency, we offer a versatile range of safety knives under two trusted brands: **Tortoris** and **Ritekknife**.

**Tortoris** is our in-house developed line of safety knives, designed with a focus on innovation, durability, and user comfort. It reflects our deep understanding of industrial needs and offers a reliable solution for a wide range of cutting applications.

To complement our **Tortoris** range, we also distribute **Ritekknife**, a carefully selected brand that aligns with our safety philosophy. **Ritekknife** offers similar tools with distinct features and models, allowing us to provide even more choice and flexibility for our clients.

Together, **Tortoris** and **Ritekknife** ensure a complete cutting solution—whether you are looking for precise utility knives, automatic blade retraction, or specialized designs for specific materials.

**Cut safer.  
Work smarter.**

Important: our safety cutters are classified according to different safety levels. This classification appears regularly in the catalog.

## Unique safety technology

**S**

**SAFE  
HIGH SAFETY**

**SEMI-AUTOMATIC  
RETRACTION MECHANISM**

When the user releases the slider, the blade automatically jumps back.

**ES**

**EXTRA SAFE  
EXTRA HIGH SAFETY**

**FULLY AUTOMATIC  
RETRACTION MECHANISM**

These cutters offer extra safety. The blade retracts automatically as soon as contact with the cutting material is lost, even when the slider is engaged. This prevents cuts in the event of loss of control.

**US**

**ULTRA SAFE  
MAXIMUM SAFETY**

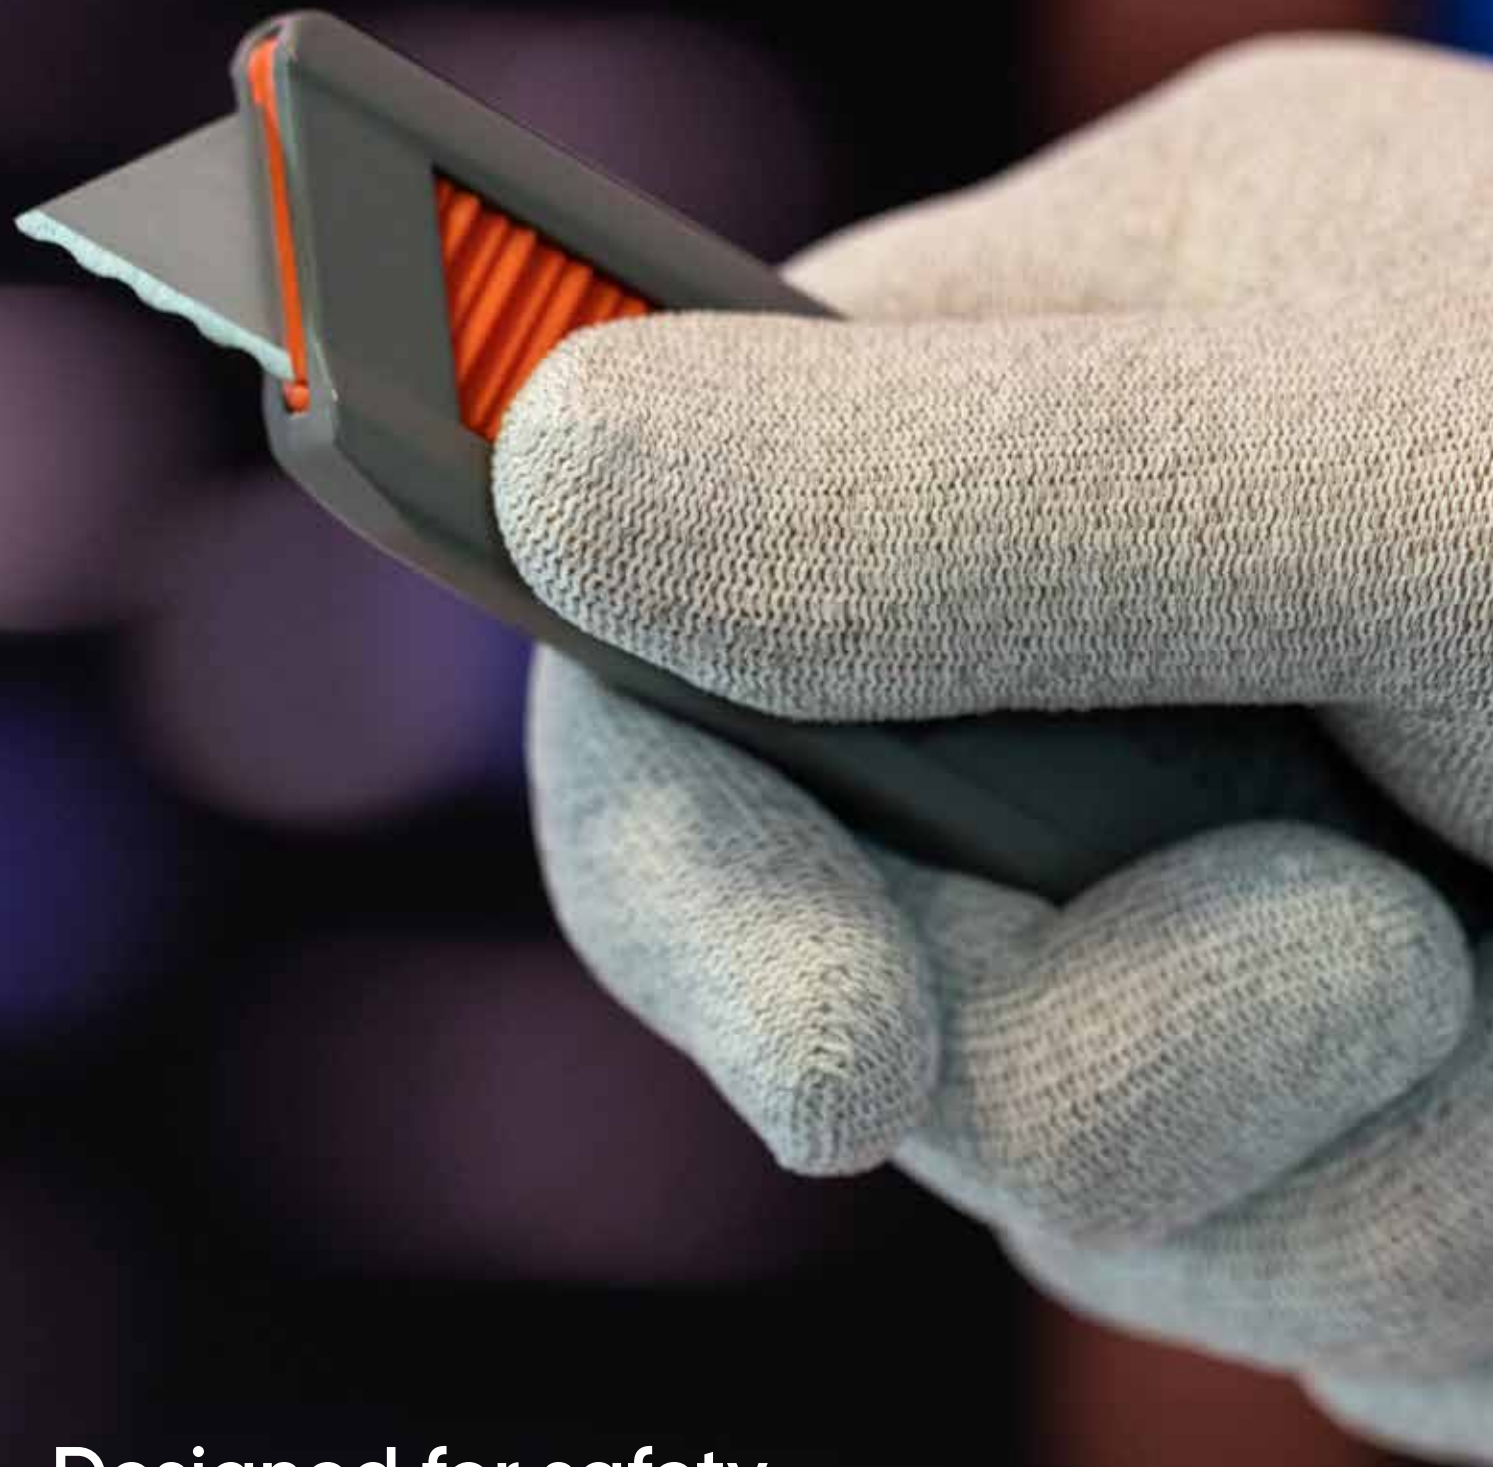

**CONCEALED  
BLADE**

The blade is integrated into the plastic, protecting both fingers and contents.

# PLASTIC SCRAPERS

Scraperite scrapers are made from plastic and also contain a plastic blade. This unique formula prevents damage to the underlying surface. These scrapers are ideal for plastics, wood and other composite materials where metal would not be suitable. What's more, these scrapers remove all kinds of glue, dirt, stickers and residues without scratching.

**Always safe  
on delicate  
surfaces**

**SRTD6GPO ♦♦♦♦**

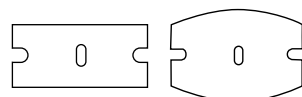

ULTRA SAFE

- Small plastic scraper
- Easily gets into places and corners
- Simple handling and high precision
- Easy blade change
- With 5 curved + 1 straight plastic spare blades (orange)
- Lanyard hole
- Ambidextrous

- Recyclable packaging
- Easy blade change
- Easy to reach corners
- Ergonomic
- Comes in different sizes
- Replacement blades from hard to soft
- Available for any application

**REPLACEMENT BLADES**
